

# OMER FAROOK MOHIDEEN ABDUL KADER

Senior Software Engineer | Azure | Distributed Systems | AI/LLM Infrastructure  
Wilmington, NC • 443-983-3644 • omerfarookbe@gmail.com • [LinkedIn](#) • [Portfolio](#) • [GitHub](#)

\$1M+ saved • 1,600+ tenants scaled • 97% faster analytics • RAG system cut research by 75% • Incident response: 2hrs → 25min

## SUMMARY

---

18 years of experience building cloud-native platforms and production data systems - from real-time exchange platforms and COBOL modernizations to multi-tenant SaaS architecture and LLM-powered analytics. For the past 4+ years at Suzy, focused on a sharded multi-tenant database architecture, real-time CDC pipelines, and a RAG analytics platform on top of a centralized data warehouse.

## EXPERIENCE

---

### Senior Software Engineer | Suzy Inc (Nov 2021 – Present)

- Delivered \$150K annual infrastructure savings by architecting horizontal database sharding in .NET Core, eliminating a SQL Server bottleneck and scaling to 1,600+ isolated Azure Elastic Pools with per-tenant data isolation and privacy enforcement.
- Reduced report generation time by 97% by building a centralized data platform using Azure Synapse and .NET Core, integrating 1,600+ tenant databases and multiple sources (Cosmos DB, MongoDB, Elasticsearch) to eliminate manual reporting.
- Reduced analyst research effort by 75% by building RAG-based conversational analytics using Python, OpenAI GPT-4o-mini and LangChain on top of a centralized data platform, enabling natural language querying and automated insights.
- Enabled near real-time analytics by implementing CDC pipelines from scratch using SQL Server, Azure Event Hubs, and Databricks - reducing data latency from batch (24+ hour delays) to under 2 minutes across 1,600+ tenant databases.
- Led service decomposition across a \$50M+ ARR, 2,500+ brand SaaS platform - migrated 17 core services toward isolated per-tenant data stores, reducing cross-tenant data risk and enabling independent scaling.
- Cut mean incident response from 2+ hours to 25 minutes via centralized observability using App Insights and Grafana across distributed microservices.
- Eliminated manual GDPR PII anonymization workflows, reducing processing time from ~2 days to minutes across 1,600+ tenants through a fully automated compliance service.

### Engineering Manager | Cognizant Technology Solutions US Corp (Feb 2014 – Nov 2021)

- Delivered \$1M in annual cost savings by re-architecting MVR ordering process (TransUnion replacing LexisNexis), maintaining full data accuracy across Liability, Auto, and Workers' Compensation lines.
- Saved \$150K/month in manual processing costs by leading design and delivery of an online Certificate of Insurance generation workflow (SCTS), eliminating agent and client manual processing for 8,000+ certificates monthly.
- Modernized IBM DB2/COBOL monolith into cloud-native .NET REST microservices over 15 months - led a 30+ engineer distributed team to zero production incidents, no business disruption, across 12,000+ downstream consumers.
- Established CI/CD pipelines, DevSecOps standards, and engineering governance across 70+ applications - reducing manual release overhead and enabling a cloud adoption roadmap.

### Senior Associate Projects | Cognizant Technology Solutions, IND (Feb 2010 – Feb 2014)

- Built real-time monitoring achieving 99% availability and engineered IMS-to-FileNet archival pipeline saving \$60K/year.

### Software Developer | Citysoftware (Aug 2005 – May 2008) & Aspen Innovation Pvt. Ltd, India (May 2008 – Feb 2010)

- Real-time exchange platform, QA medical transcript automation and payroll systems.

## SKILLS

---

**Languages & Frameworks:** C#, ASP.NET, Python, React, TypeScript, .NET Core

**AI/LLM:** RAG, LLM Orchestration, LangChain, LangGraph, OpenAI, Generative AI, Vector Embeddings, CDC Pipelines

**Data:** Azure Synapse, Databricks, SQL Server, PostgreSQL, Cosmos DB, MongoDB, Elasticsearch

**Cloud:** Azure (Container Apps, App Services, Functions, Blob Storage, Event Hubs, Service Bus, API Management), Azure IaC (Bicep, ARM Templates) Docker, CI/CD (GitHub Actions, Azure DevOps)

**Observability & Security:** Azure Monitor, App Insights, Grafana, LangSmith, OAuth 2.0, JWT, Azure Key Vault, Managed Identity

**Architecture:** Distributed Systems Architecture, Microservices, Event-Driven Architecture, Multi-Tenant SaaS, High Availability

## EDUCATION

---

**Bachelor of Computer Science and Engineering** | Madurai Kamaraj University, TamilNadu, India | 2000 - 2004
