

OMER FAROOK MOHIDEEN ABDUL KADER

Senior Software Engineer (Staff-Level Scope) | Cloud Architecture | Distributed Systems | Data & AI Platforms
Wilmington, NC (**Open to Relocation**) | 443-983-3644 | omerfarookbe@gmail.com | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)
\$1M+ cost savings • 2,500+ tenants scaled • AI platform cut research effort by 75% • MTTR reduced 2hrs to 25min

Staff level software engineer with 18+ years of experience designing and building distributed, cloud-native SaaS platforms on Azure. Strong background in multi-tenant architectures, event-driven systems, and large-scale data platforms. Led modernization of enterprise systems from monoliths to microservices, improving scalability, operational efficiency, and reliability. Recently focused on AI-enabled platforms using LLM orchestration, RAG pipelines, and real-time data processing.

WORK EXPERIENCE

Senior Software Engineer – Cloud & Platform Architecture | Suzy Inc | Nov 2021 – Present

Platform Architecture & Cloud Engineering

- Led architecture of a 15+ service cloud-native SaaS platform on Azure, establishing microservice, observability, and resiliency standards that improved platform scalability, reduced operational complexity, and enabled onboarding of 2,500+ enterprise tenants without architectural redesign.
- Delivered \$150K in annual infrastructure savings by designing and coding a horizontal database sharding platform on .NET Core, migrating from shared SQL Server to 1,500+ isolated Azure Elastic Pools with enforced data privacy.
- Engineered a centralized JWT microservice (ASP.NET Core, Azure APIM, and policy-based authorization) with JWT enforcement, cutting per-service implementation from ~2 weeks to under 4 days.
- Built a fault-tolerant multi-tenant data sync platform (.NET Core, pub/sub event workers) processing 50,000+ records per batch across tenants with zero-downtime reconfiguration and automated secret rotation via Azure Key Vault.
- Built and maintained Azure infrastructure using Bicep-based Infrastructure-as-Code templates, standardizing deployment of Container Apps, Event Hubs, Key Vault, APIM, monitoring resources, and supporting services across development, staging, and production environments.

AI, ML & Data Platform Engineering

- Architected and implemented AI/LLM integration as a reusable platform capability, engineering RAG pipelines, LLM orchestration (Claude Sonnet 4.6, OpenAI GPT-4o-mini, LangChain), model evaluation harnesses, and CI/CD hooks for AI pipelines; delivered intelligent workflow services (automated transcription, conversational data access, AI-assisted research analysis) that reduced analyst effort by ~75%.
- Built a LangGraph-based orchestration layer coordinating multi-step AI workflows across Claude, OpenAI, and Gemini models, implementing stateful execution, fallback routing, tool invocation, response caching, and provider failover strategies to improve reliability and control inference costs; implemented AI-driven workflows using APIs, MCP tool servers, with caching strategies that reduced costs by 40%.
- Engineered a CDC platform (Azure Event Hubs, Databricks, Python/Spark) processing 50K+ database change events with ~2-minute end-to-end latency, eliminating bottlenecks and enabling near real-time analytics, and AI-powered insight.
- Delivered production React/TypeScript applications using AI-assisted development workflows (Claude, Cursor, GitHub Copilot), reducing delivery timelines from weeks to days while maintaining code review and quality standards.

Event-Driven Data & Integration Platform

- Architected and built a multi-tenant survey orchestration platform (.NET, Azure Event Hubs, Cosmos DB) with 10+ async event-driven daemon workers and a high-throughput data sync engine, reducing member eligibility resolution latency by ~80% across 3 global data providers and achieving a consistent sub-60-second SQL/Elasticsearch consistency SLA.

Reliability, Security & Observability

- Designed and implemented a GDPR-compliant PII anonymization using data masking covering 50K–80K users across tenants; coded the configurable batch daemon, per-tenant SQL isolation, and audit logging layer that eliminated all manual compliance workflows platform-wide.
- Engineered a 30+ plugin integration ecosystem (Cint, PureSpectrum, TangoCard, Twilio, Auth0, Azure AI) by architecting the plugin framework and implementing vendor integrations that cut onboarding a new vendor from ~3 weeks to under 5 days and enabled zero-downtime pipeline reconfiguration.
- Owned observability strategy for distributed microservices, instrumenting Azure Monitor, App Insights (OpenTelemetry), Datadog, and Grafana with distributed tracing and structured logging, cutting mean incident response time from over 2 hours to under 25 minutes.
- Designed and executed a zero-downtime Elasticsearch migration strategy using dual-write indexing, snapshot restoration, across tenant indices, eliminating planned maintenance windows and reducing service disruptions by over 99%.

Engineering Leadership & Mentorship

- Led technical direction for a 12+ engineer team across microservices, event-driven pipelines, and AI/LLM features; improved cross-team delivery consistency and reduced architectural fragmentation across distributed services.
- Mentored 8+ engineers and emerging architects through architecture reviews and design sessions, improving engineering autonomy and enabling engineers to independently deliver and own distributed platform components.

Engineering Manager | Cognizant Technology Solutions US Corp | Feb 2014 – Nov 2021

Enterprise Architecture & Hands-On Engineering

- Owned end-to-end technical strategy and hands-on architecture for a mission-critical insurance SaaS platform, designing and coding key modernization components while driving full re-architecture from legacy monolith to cloud-native, containerized, event-driven microservices serving tens of thousands of concurrent users with sub-second API SLAs.
- Established enterprise architecture and SDLC standards across 70+ applications and 30+ engineering teams, improving deployment consistency, security compliance, and operational reliability for business-critical insurance systems.
- Architected and implemented cloud-native modernization of legacy IBM DB2/COBOL systems, engineering .NET REST APIs and CA Coolgen compoxy integrations that enabled full-stack SaaS multi-tenancy with zero business disruption.
- Directed 15+ modernization programs involving mainframe, middleware, database, and application platform upgrades, reducing technical debt while improving scalability, security posture, and supportability across the enterprise portfolio.
- Led cross-functional alignment across Mainframe, Documaker, QA, and business stakeholder teams, coordinating technical roadmap milestones and managing concurrent delivery of 15+ complex projects with zero-loss data tolerance.

Security, DevSecOps & Platform Reliability

- Established and implemented DevSecOps standards by integrating IBM AppScan and Black Duck into CI/CD pipelines (Jenkins, UCD) and enforcing 100% security scan compliance as a hard gate before every production deployment.
- Built a Production Application Dashboard with real-time monitoring, alerting, and incident response workflows, achieving 99%+ availability across high-volume insurance workloads serving tens of thousands of users over 7 years.
- Engineered integrations with LexisNexis, Verisk, CoreLogic, and POLK data services, enhancing underwriting accuracy and policy processing throughput across all major insurance product lines.

Business Impact & Cost Optimization

- Re-architected the MVR ordering workflow by replacing LexisNexis with TransUnion as the primary provider, redesigning integration pipelines, and underwriting workflows while data accuracy and compliance, resulting \$1M annual cost savings.
- Led design and development of an automated Certificate of Insurance generation, replacing manual service-center workflows with self-service document generation and validation, reducing operational workload saving \$150K per month.

Engineering Leadership & Mentorship

- Led a distributed engineering organization of 30+ engineers across US and India, driving modernization initiatives across 70+ applications while improving delivery predictability, engineering standards, and cross-team architectural alignment.
- Advised business and IT leadership on platform strategy, cloud adoption roadmaps, and vendor evaluation, presenting architecture recommendations and ROI analyses to executive stakeholders.
- Established engineering performance scorecards tracking deployment frequency, lead time, MTTR, change failure rate, and SLA compliance, providing leadership visibility into delivery and operational performance across 70+ applications.

Senior Associate Projects | Cognizant Technology Solutions, India | Feb 2010 – Feb 2014

- Built real-time monitoring and alerting systems, achieving 99% application availability across insurance platforms.
- Engineered legacy policy archival pipeline from IMS to FileNet (\$60K/year storage savings)
- Managed production support, application monitoring, and incident resolution, ensuring seamless outage handling and maintaining 99%+ uptime across critical insurance SaaS platforms

Software Developer | Aspen Innovation Pvt. Ltd, India | May 2008 – Feb 2010

- Built QA automation and an in-house payroll system, eliminating manual test cycles and reducing finance processing overhead across the organization.

Software Developer | Citysoftware, India | Aug 2005 – May 2008

- Engineered real-time money exchange platform connecting 20+ HK branches; developed online ticket booking application

SKILLS

- Architecture:** Distributed Systems, Multi-Tenant SaaS, Cloud & Enterprise Architecture, Event-Driven Architecture, Microservices, Sharding, Observability, Reliability Engineering
- Cloud & Platform:** Azure, App Services, Functions, Container Apps, Event Hubs(Kafka-compatible), APIM, Key Vault, Bicep IaC, Azure Monitor, App Insights
- AI/ML & Data Platform:** RAG, LLM Orchestration, Vector Embeddings, Prompt Engineering, AI Governance & Guardrails, LangChain, LangGraph, LangSmith, Databricks Vector Store, OpenAI, Claude, Gemini
- Languages & Frameworks:** C#, .NET Core, ASP.NET Core, Python, PySpark, React, TypeScript
- Data & Storage:** SQL Server, Cosmos DB, Elasticsearch, Databricks Delta Lake, MongoDB, PostgreSQL
- DevOps & Observability:** GitHub Actions, Azure DevOps, OpenTelemetry, Datadog, Grafana, Jenkins
- Security & Compliance:** JWT, GDPR, IBM AppScan, Black Duck
- Developer Productivity:** Claude, Copilot, Cursor

EDUCATION

Bachelor of Computer Science and Engineering - Madurai Kamaraj University, Tamilnadu, India
