

OMER FAROOK MOHIDEEN ABDUL KADER

Principal Software Engineer | Cloud & Platform Architecture | AI-Native Platform Engineering

Wilmington, NC | 443-983-3644 | omerfarookbe@gmail.com | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

\$1M+ cost savings • 99% uptime across 70+ applications • AI/ML pipelines serving 1M+ users • 400+ Fortune 500 brands

18+ years building and architecting SaaS platforms on Azure and .NET, equally strong writing production code and designing scalable systems across microservices, event-driven pipelines, and cloud-native deployments. Ships AI as a real platform capability: RAG pipelines, LLM orchestration, model evaluation harnesses, and CI/CD-integrated AI workflows that cut analyst effort by 75% and inference costs by 40%. Proven technical leader with experience managing teams of up to 30 engineers - driving roadmaps, aligning cross-functional stakeholders, and mentoring engineers at all levels while staying deeply hands-on.

WORK EXPERIENCE

Principal Software Engineer – Cloud & Platform Architecture | [Suzy Inc](#) | Nov 2021 – Present

Platform Architecture & Cloud Engineering

- Led the backend architecture of a 17-service high-availability distributed SaaS platform on Azure (Container Apps/Kubernetes-backed, Bicep IaC), serving 1M+ users, 50K–100K MAU, and 400+ Fortune 500 brands; engineered for elasticity, fault tolerance, and horizontal scalability across microservices and event-driven pub/sub pipelines.
- Owned technical roadmap for a \$50M+ ARR platform, spearheading service decomposition, cloud adoption, and horizontal scalability across 2,500+ brand tenants with isolated per-tenant data stores and sub-60-second consistency SLAs.
- Delivered \$150K in annual infrastructure savings by designing and coding a horizontal database sharding platform on .NET Core, migrating from shared SQL Server to 1,600+ isolated Azure Elastic Pools with enforced data privacy.
- Engineering a centralized JWT microservice (ASP.NET Core, Azure APIM) with JWT enforcement, cutting per-service implementation from ~2 weeks to under 4 days and enabling stateless horizontal scaling.
- Built a fault-tolerant multi-tenant data sync platform (.NET Core, pub/sub event workers) processing 5,000+ documents per batch across 2,500+ tenants with zero-downtime reconfiguration and automated secret rotation via Azure Key Vault.

AI, ML & Data Platform Engineering

- Architected and implemented AI/LLM integration as a reusable platform capability, engineering RAG pipelines, LLM orchestration (OpenAI GPT-4o-mini, LangChain), model evaluation harnesses, and CI/CD hooks for AI pipelines; delivered intelligent workflow services (automated transcription, conversational data access, AI-assisted research analysis) that reduced analyst effort by ~75%.
- Built a multi-LLM orchestration layer (OpenAI, Gemini via LangGraph) across a 15-service Azure Container Apps architecture; implemented AI-moderated interview workflows using OpenAI Realtime API and MCP tool servers, with TTL-based caching reducing inference costs by ~40%.
- Engineered a real-time event-driven CDC pipeline (Azure Event Hubs, Databricks Delta Lake, Python/Spark), ingesting 500K+ SQL change events per run at ~2-minute latency and powering a Databricks Data Warehouse with vectorization pipelines that enabled AI-powered conversational analytics for enterprise brand teams across 1,600+ tenants.
- Accelerated frontend delivery by building internal tooling dashboards in React/TypeScript with AI-assisted development (Claude, Cursor, GitHub Copilot), shipping production-ready UIs in days rather than weeks without compromising code quality or review standards.

Event-Driven Data & Integration Platform

- Architected and built a multi-tenant survey orchestration platform (.NET, Azure Event Hubs, Cosmos DB) with 10+ async event-driven daemon workers and a high-throughput data sync engine, reducing member eligibility resolution latency by ~80% across 3 global data providers and achieving a consistent sub-60-second SQL/Elasticsearch consistency SLA.

Reliability, Security & Observability

- Designed and implemented a GDPR-compliant PII anonymization service covering 50K–80K users across 2,500+ tenants; coded the configurable batch daemon, per-tenant SQL isolation, and audit logging layer that eliminated all manual compliance workflows platform-wide.
- Engineered a 31-plugin integration ecosystem (Cint, PureSpectrum, TangoCard, Twilio, Auth0, Azure AI) by architecting the plugin framework and implementing vendor integrations that cut onboarding a new vendor from ~3 weeks to under 5 days and enabled zero-downtime pipeline reconfiguration.
- Owned observability strategy for distributed microservices, instrumenting Azure Monitor, App Insights (OpenTelemetry), Datadog, and Grafana with distributed tracing and structured logging, cutting mean incident response time from over 2 hours to under 25 minutes.
- Designed and executed an Elasticsearch hypership strategy with zero-downtime index migrations via dual-mode snapshot/live-dump, reducing cluster downtime by over 99% across 2,500+ brand indices.

Engineering Leadership & Mentorship

- Led technical direction for a 12+ engineer team, driving architecture decisions, code reviews, and hands-on guidance across microservices, event-driven pipelines, and AI/LLM integration to enable autonomous, high-quality delivery.
- Mentored 8+ engineers and new architects through onboarding, system design reviews, and deep code walkthroughs, accelerating ramp-up and reinforcing engineering standards across a multi-tenant SaaS platform.

Principal Engineer & Engineering Manager | Cognizant Technology Solutions US Corp | Feb 2014 – Nov 2021

Enterprise Architecture & Hands-On Engineering

- Owned end-to-end technical strategy and hands-on architecture for a mission-critical insurance SaaS platform, designing and coding key modernization components while driving full re-architecture from legacy monolith to cloud-native, containerized, event-driven microservices serving tens of thousands of concurrent users with sub-second API SLAs.
- Defined and enforced enterprise engineering standards (architecture reviews, security compliance gates, CI/CD pipelines, DR requirements) across 70+ applications over 7 years, maintaining 99%+ uptime while writing and reviewing production code throughout.
- Architected and implemented cloud-native modernization of legacy IBM DB2/COBOL systems, engineering .NET REST APIs and CA Coolgen comproxy integrations that enabled full-stack SaaS multi-tenancy with zero business disruption.
- Drove 15+ technology currency initiatives (W2K16, SQL2016, CA Gen 8.5, RHEL 7, WAS 9) across the enterprise portfolio, ensuring regulatory compliance, scalability, and technical debt elimination at scale.
- Led cross-functional alignment across Mainframe, Documaker, QA, and business stakeholder teams, coordinating technical roadmap milestones and managing concurrent delivery of 15+ complex projects with zero-loss tolerance for customer data.

Security, DevSecOps & Platform Reliability

- Established and implemented DevSecOps standards by integrating IBM AppScan and Black Duck into CI/CD pipelines (Jenkins, UCD) and enforcing 100% security scan compliance as a hard gate before every production deployment.
- Built a Production Application Dashboard with real-time monitoring, alerting, and incident response workflows, achieving 99%+ availability across high-volume insurance workloads serving tens of thousands of users over 7 years.
- Engineered integrations with LexisNexis, Verisk, CoreLogic, and POLK data services, enhancing underwriting accuracy and policy processing throughput across all major insurance product lines.

Business Impact & Cost Optimization

- Re-architected the MVR ordering process using TransUnion (replacing LexisNexis), delivering \$1M in annual cost savings while maintaining data accuracy across Liability, Auto, and Workers' Compensation policy lines.
- Led design and development of the Service Center Tracking System (SCTS), engineering the online Certificate of Insurance generation workflow that saved \$150K/month in manual processing costs for thousands of insured clients and agents.

Engineering Leadership & Mentorship

- Managed and mentored 30+ engineers across onshore/offshore teams, owning performance reviews, career development, and technical leadership while driving large-scale modernization programs across 70+ applications.
- Advised business and IT leadership on platform strategy, cloud adoption roadmaps, and vendor evaluation, presenting architecture recommendations and ROI analyses to executive stakeholders.
- Established engineering excellence frameworks and delivery scorecards (Cycle Time, Lead Time, Deployment Frequency, Defect Density, MTTR, Change Failure Rate, SLA compliance), regularly presenting insights to leadership.

Senior Associate Projects | Cognizant Technology Solutions, IND | Feb 2010 – Feb 2014

- Built real-time monitoring and alerting systems, achieving 99% application availability across insurance platforms.
- Engineered legacy policy archival pipeline from IMS to FileNet (\$6K/year storage savings)
- Managed production support, application monitoring, and incident resolution, ensuring seamless outage handling and maintaining 99%+ uptime across critical insurance SaaS platforms

Software Developer | Aspen Innovation Pvt. Ltd, IND | May 2008 – Feb 2010

- Built QA automation and an in-house payroll system, eliminating manual test cycles and reducing finance processing overhead across the organization.

Software Developer | Citysoftware, IND | Aug 2005 – May 2008

- Engineered real-time money exchange platform connecting 20+ HK branches; developed online ticket booking application

SKILLS

- **Architect & Platform Skills:** Distributed Systems Design, High Availability & Fault Tolerance, Scalability Patterns, Load Balancing Strategies, Multi-Tenant SaaS Architecture, Cloud & Enterprise Architecture, Event-Driven / Pub-Sub Architecture, Sharding Strategy, Observability Strategy, Technical Roadmap Ownership, Platform Strategy, Reliability Engineering, DevSecOps, Staff/Principal Engineering Leadership, Disaster Recovery
- **Hands-On Technical Skills:** Azure (Container Apps/Kubernetes-backed, Event Hubs/Kafka-compatible, Key Vault, APIM, Functions, Bicep IaC, Azure Monitor, App Insights), .NET Core, C#, ASP.NET, Python, PySpark, REST APIs, React, TypeScript, SQL Server, Cosmos DB, Elasticsearch, Databricks Delta Lake, MongoDB, Docker, GitHub Actions, Azure DevOps, Datadog, Grafana, Jenkins
- **AI/ML & Data Platform Skills:** Retrieval-Augmented Generation (RAG), LLM Orchestration, Vector Embeddings, Prompt Optimization, AI Governance & Guardrails, LangChain, LangGraph, LangSmith, Databricks Vector Store, OpenAI, Azure; AI-assisted development (Claude, Copilot, Cursor); Security & Compliance: JWT, GDPR, IBM AppScan, Black Duck

EDUCATION

Bachelor of Computer Science and Engineering - Madurai Kamaraj University, Tamilnadu, India | 2000 – 2004
